

[SMOKING SYSTEM COMPRISED OF A JEWELRY OR ORNAMENT SMOKING DEVICE AND A METHOD OF FORMING A SMOKING MIXTURE]

Abstract of Disclosure

The invention provides a smoking system comprised of an ornament or jewelry smoking device and a method of forming a smoking mixture. The smoking device comprises a camouflaging body made of a thermally insulating material that conceals the smoking device in an ornamental or jewelry aspect. The camouflaging body comprises a first opening to which is detachably mounted a screen receptacle that receives the smoking mixture, and a second opening forming a mouthpiece that communicates with the screen receptacle. Furthermore, a smoking mixture fabricated by the invention is first formed in a plurality of basic regularly shaped constitutions. The basic constitutions are compacted to obtain a pre-shaped form of the smoking mixture that is assembled with a screen receptacle to be smoked. Hence formed, the pre-shaped smoking mixture has a size that is reduced and a shape that can be varied, thereby allowing various forms of packaging and economical smoking.
